

runZero API

runZero API. API use is rate limited, you can make as many calls per day as you have licensed assets.

More information: <https://www.runzero.com/>

Contact Info: support@runzero.com

Version: 4.0.250415.0

BasePath:/api/v1.0

Commercial

<https://www.runzero.com/legal/terms>

Access

1. HTTP Bearer Token authentication
2. OAuth AuthorizationUrl:TokenUrl:<https://console.runzero.com/api/v1.0/account/api/token>

Import

[POST /import/org/{orgID}/assets](#) [Up](#)

Import assets described by a registered custom integration ([importCustomIntegrationAssets](#))

Assets can be discovered, imported, and merged by runZero scan tasks, first-party integrations, and third-party defined custom integrations. See [/account/custom-integrations](#). Currently only assets for custom integrations are importable here.

Path parameters

orgID (required)

Path Parameter — The ID of the organization to import the assets into default: null format: uuid

Consumes

This API call consumes the following media types via the Content-Type request header:

- multipart/form-data

Form parameters

sitelD (required)

Form Parameter — The ID of the site assets are to be imported into. default: null format: uuid

customIntegrationId (required)

Form Parameter — The unique ID of the registered custom integration which produced the asset data. Uniqueness is not checked/enforced. See [/account/custom-integrations](#) api. default: null format: uuid

importTask (required)

Form Parameter — default: null

assetData (required)

Form Parameter — A gzip (not .tar.gz) compressed file containing ImportAsset objects. The file data may be a JSON array of ImportAsset objects, e.g. [{}], or JSON format, with a single JSON representation of an ImportAsset object on each new line, e.g. {}
{}
{} default: null format: binary

Return type

Task**Example data**

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

Responses**200**

task information [Task](#)

401

Access token is missing or invalid [Problem](#)

404

Resource not found [Problem](#)

POST /import/org/{orgID}/assets

[Up](#)

Import assets described by a registered custom integration ([importCustomIntegrationAssets](#))

Assets can be discovered, imported, and merged by runZero scan tasks, first-party integrations, and third-party defined custom integrations. See [/account/custom-integrations](#). Currently only assets for custom integrations are importable here.

Path parameters**orgID (required)**

Path Parameter — The ID of the organization to import the assets into default: null format: uuid

Consumes

This API call consumes the following media types via the Content-Type request header:

- multipart/form-data

Form parameters**siteld (required)**

Form Parameter — The ID of the site assets are to be imported into. default: null format: uuid

customIntegrationId (required)

Form Parameter — The unique ID of the registered custom integration which produced the asset data. Uniqueness is not checked/enforced. See [/account/custom-integrations](#) api. default: null format: uuid

importTask (required)

Form Parameter — default: null

assetData (required)

Form Parameter — A gzip (not .tar.gz) compressed file containing ImportAsset objects. The file data may be a JSON array of ImportAsset objects, e.g. [{}], or JSONL format, with a single JSON representation of an ImportAsset object on each new line, e.g. {}
default: null format: binary

Return type

Example data

Content-Type: application/json

```
{
    "detail" : "A human readable explanation specific to this occurrence of the problem.",
    "title" : "A short summary of the problem type.",
    "status" : 140
}
```

Produces

This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

id
`String`, format: string

type (optional)
`String`

Enum:
x509
ssh

created_at (optional)
`Long`, format: int64

updated_at (optional)
`Long` When the certificate was last seen in a response from a service, and updated. format: int64

organization_id
`UUID` format: uuid

names (optional)
`array[String]`. An assembled list of all names in the certificate.

self_signed (optional)
`Boolean` Whether the certificate appears to be self-signed based on subject and authority.

hidden (optional)
`Boolean` Whether the certificate has been hidden from the default certificates view.

serial (optional)
`String`. The serial number of the certificate. format: string

validity_start (optional)
`Long` When the certificate becomes valid. format: int64

validity_end (optional)
`Long` When the certificate ceases to be valid. format: int64

public_key (optional)
`String`, format: base64

public_key_bits (optional)
`Integer` format: int32

public_key_algorithm (optional)
`String`, format: string

signature (optional)
`String`, format: base64

signature_algorithm (optional)
`String`, format: string

fp_bkhash (optional)
`String`. The badkeys hash. format: string

fp_sha1 (optional)
`String`. The SHA1 hash of the certificate. format: string

fp_sha256 (optional)
`String`. The SHA256 hash of the certificate. format: string

fp_md5 (optional)
`String`. The MD5 hash of the certificate (for SSH). format: string

attributes (optional)
`map[String, Certificate_attributes_value]`. Properties specific to the certificate type.

Certificate_attributes_value -**Up**

subject (optional)
`String`. The subject of the certificate. format: dn

cn (optional)
`String`. The Common Name field from the certificate (no longer used by web browsers). format: string

version (optional)
`Integer`. The version of the certificate. format: int32

issuer (optional)
`String`. The authority which issued the certificate. format: dn

subject_key_id (optional)
`String`. The key ID of the subject of the certificate. format: string

authority_key_id (optional)

String. The key ID of the authority which signed the certificate. format: string

ocsp_server (optional)

array[String]. Zero or more OCSP server URLs. format: url

crl_distribution_points (optional)

array[String]. Zero or more URLs of CRLs. format: url

issuing_certificate_url (optional)

array[String]. Zero or more URLs where the issuing certificate can be found. format: url

is_ca (optional)

Boolean Whether the certificate claims to be a Certificate Authority.

key_usage (optional)

array[String]. Valid purposes the certificate's key can be used for.

ext_key_usage (optional)

array[String]. Additional purposes the certificate's key can be used for.

san_dns_names (optional)

array[String]. Subject Alternative Name hostnames. format: hostname

san_ip_addresses (optional)

array[String]. Subject Alternative Name IP addresses.

san_email_addresses (optional)

array[String]. Subject Alternative Name email addresses. format: email

san_uris (optional)

array[URI]. Subject Alternative Name URIs. format: uri

public_key_parameters (optional)

Object Parameters specific to the public key type.

explorers_total (optional)
`Long` The number of explorers available in the zone format: int64

tasks_active (optional)

Long The number of tasks executing in the zone format: int64

tasks_waiting (optional)

Long The number of tasks waiting to execute in the zone format: int64

organization_id (optional)

UUID The ID of the organization the hosted zone is assigned to format: uuid

ImportAsset -

[Up](#)

Represents a custom asset to be created or merged after import.

id

String Any value which can uniquely identify the asset within the custom integration.

runZeroID (optional)

UUID The unique identifier of the runZero asset to merge into. format: uuid

networkInterfaces (optional)

array[NetworkInterfaces_inner] The asset's networking configuration.

hostnames (optional)

array[String] Represents hostnames the asset is assigned or reachable at. These can be fully-qualified hostnames with the domain name, or a short hostname.

domain (optional)

String Represents a single domain name which could be applied to all non-fqdns in the hostnames field.

firstSeenTS (optional)

Date Represents the earliest time the asset was seen by the custom integration reporting it, using a date string as defined by RFC 3339, section 5.6. format: date-time

os (optional)

String The name of the asset's operating system. It is advisable to keep the data clean by normalizing to existing values when possible.

osVersion (optional)

String The version of the asset's operating system. It is advisable to keep the data clean by normalizing to existing values when possible.

manufacturer (optional)

String The manufacturer of the operating system of the asset. It is advisable to keep the data clean by normalizing to existing values when possible.

model (optional)

String The hardware model of the asset. It is advisable to keep the data clean by normalizing to existing values when possible.

tags (optional)

array[String] Arbitrary string tags applied to the asset.

deviceType (optional)

String

customAttributes (optional)

map[String, CustomAttributes_value] Flat map of arbitrary string key/value pairs representing custom attribute data not described in properties above. Note the maximum number of keys and length of values. Additionally, property names may only be 256 characters long.

ImportTask - ImportTask

[Up](#)

Information which describes the task created when asset data is imported.

name

String

description (optional)

String

excludeUnknown (optional)

Boolean Instructs the data ingestion process whether to skip assets which do not merge into an existing asset in the asset inventory

tags (optional)

array[String] Arbitrary string tag values which are applied to the asset data import task created.

String. Optional probe list, otherwise all probes are used

ScanTemplate -[Up](#)

A scan task template

id
UUID ID of the template. format: uuid

name (optional)
String. The name of the template.

description (optional)
String. The description of the template.

client_id (optional)
UUID ID of the account which owns the template. format: uuid

organization_id
UUID ID of the organization the template is available in. format: uuid

agent_id (optional)
UUID ID of the explorer which may execute the template. format: uuid

site_id (optional)
UUID ID of the site the template is being used in. format: uuid

cruncher_id (optional)
UUID ID of the runZero cruncher the task is executing on. format: uuid

created_at (optional)
Long Unix timestamp value indicating when the template was created. format: int64

created_by (optional)
String. The username of the account which created the template.

created_by_user_id (optional)
UUID The ID of the account which created the template. format: uuid

updated_at (optional)
Long Unix timestamp value indicating when the template was last modified. format: int64

type (optional)
String. The type of task the template creates.

status (optional)
String. The status of the last task using the template.

error (optional)
String. The error message, if any, of the last task using the template.

params (optional)
 $map[String, String]$. A number of task parameter values. Currently there is no authoritative list of in-use values. See existing templates for examples.

stats (optional)

map[String, oas.any_type_not_mapped] A map of statistics about the last task executed with the template. Currently there is no authoritative list of in-use values. See existing templates for examples.

hidden (optional)

Boolean A flag indicating whether the item is hidden from common view.

parent_id (optional)

UUID The ID of the parent entity of the task scheduled. format: uuid

recur (optional)

Boolean A flag representing whether derived tasks are scheduled to repeat.

recur_frequency (optional)

String A string time duration value representing execution frequency, if scheduled to repeat. You may use values including as once, hourly, daily, weekly, monthly, continuous

start_time (optional)

Long Unix timestamp representing the next execution time. format: int64

recur_last (optional)

Long Unix timestamp representing the last execution if scheduled to repeat. format: int64

recur_next (optional)

Long Unix timestamp representing the next execution if scheduled to repeat. format: int64

recur_last_task_id (optional)

UUID The ID of the task that last executed if scheduled to repeat. format: uuid

grace_period (optional)

String Additional time beyond hard expiration deadline by which the task may still be allowed to execute.

custom_integration_id (optional)

UUID The ID of the custom integration source, if the last task executed with this template was an import of Asset Data. format: uuid

source_id (optional)

String The numeric ID of the data source, if the task executed with this template is a runZero scan or third party data connection import.

template_id (optional)

UUID The ID of the template. format: uuid

size_site (optional)

Long The size in assets of the site the last task the template was executed against. format: int64

size_data (optional)

Long The total size of result data of the last task the template was used with. format: int64

size_results (optional)

Long The number of results in the last task the template was used with. format: int64

hosted_zone_id (optional)

UUID The ID of the hosted zone that ran the last task the template was used with. format: uuid

linked_task_count (optional)

Integer The number of tasks derived from the template. format: int32

global

Boolean Whether the template is globally available to all organizations.

acl

map[String, oas.any_type_not_mapped] A map of IDs to strings which describe how the template may be accessed. Currently there is no authoritative list of in-use values. See existing templates for examples.

ScanTemplateOptions -

[Up](#)

Options which can be set to create a scan template.

name

String Name of the template.

description (optional)

String Description of the template.

organization_id

UUID The ID of the organization the template will be created in format: uuid

params (optional)

map[String, String] A number of scan parameter values. Currently there is no authoritative list of acceptable values. See existing templates for examples.

global

Boolean Whether the template is globally available to all organizations.

acl

map[String, oas.any_type_not_mapped] A map of IDs to strings which describe how the template may be accessed. Currently there is no authoritative list of acceptable values. See existing templates for examples.
